

# GINA CENTRAL

FIRST RESPONSE INTERVENTION SYSTEMS

*"IN THE CASE OF EMERGENCY,  
DISPATCH & NAVIGATE YOUR UNITS IN THE AREA,  
ESTABLISH LIVE INFORMATION LINKS  
AND ENSURE THEIR PROTECTION  
AND SAFETY."*

**GINA CENTRAL** is designed to provide Public Security Forces (Police, Firebrigades and Rescue Services) with a modern dispatch and command & control tool. The platform is based on collaborative map with instant updates.

**GINA CENTRAL** allows interactions with other unit in the terrain and enables operation dispatcher to collect all the mission critical datasets.

The user can see what is currently happening in the field thanks to common operational map data and routing in real time for all participants. Statuses of the vehicles, field report channels, photos, livestreams timeline - all of that is quickly accessible and updated in real-time.

All informations are secured on client's infrastructure (server), meeting high confidentiality standards (SSL 8 & ISO 27001).

# GINA CENTRAL

FIRST RESPONSE INTERVENTION SYSTEMS

## SPECIFICATIONS

- Dispatching
- Real-time GPS location overview
- Shortest path routing/navigation
- Statuses
- Task management and way-pointing
- Mission progress reporting
- Live sharing of data sets
- Built in mapping features (drawings, icons, multimedia)
- Access to the history via interactive timeline
- Geographical and analytical features (data layers, heat maps, filters)

## SERVER REQUIREMENTS

- MS Windows Server 2012 or higher
- MS SQL 2012 or higher
- CPU equivalent to dual-core 2 GHz (quad-core recommended)

## WORKSTATION REQUIREMENTS

- MS Windows 7/8/10 OS
- CPU 2 GHz
- 4 GB RAM
- 1 GB HDD space

## BEST WITH GINA TABLET

- 1 GB RAM (recommended 4 GB)
- 500 GB HDD space
