“LINK ALL PARTS OF PUBLIC SECURITY FORCES TOGETHER FOR FASTER ARRIVAL TIME TO THE SCENE”

GINA TABLET is a smart application designed to help Public Security Forces (Police, Firebrigades and Rescue Services) in the terrain. The system communicates with the operation center and provides commanders with various management and decision support tools during all phases of an intervention.

GINA TABLET can be used on route to the scene (dispatch lists, statuses, online navigation etc.), at the scene itself (mutual coordination, map drawings, taking & sharing photos etc.) and also after the intervention (photo archive, data store, visualization of the track to the scene etc.)

The vehicle installation procedure takes approximately **30 minutes** and there is no need to directly interfere with the vehicle interior.

GINA TABLET

FIRST RESPONSE INTERVENTION SYSTEMS

EN ROUTE

- Simple receiving of dispatch list
- Status dispatching with configuration
- Statuses do not depend on radio signal
- Real time tracking for all cooperating units
- Online turn-by-turn navigation
- Current traffic situation
- Possibility to directly call the announcer of the incident

AT SCENE

- Mutual coordination of the units' arrival
- Possibility to take, edit and transmit photos
- Shared operational view with map drawings
- Points of interest
- Access to external applications (RESCAR, HAZMAT)
- Access to evacuation plans
- Case context related media

POST INTERVENTION

- Archive of the photos
- Display the actual units' route
- Customizable data store
- Configurable contact list and documentation
- History of dispatch lists

TECHNOLOGY

Android tablet with a GSM module, a camera and a microSD card for offline maps

Sygyic with emergency maps (offline turn-by-turn navigation, road closures, extra traffic situation)

SSL channel (AES 256-bit), ISO27001 infrastructure

Telephone network (GSM module), GPRS optimized

Evacuation plans, hazmat database, phone list, external maps
